Summary

I'm a young programmer from Spain who loves coding. I've learned web development and I've created some webs. Now I've been doing android development and I've created a few apps, some of them are on Github. I would like to gain experience and learn new skills. I want to learn new programming languages.

Date of Birth: 03/06/1999

Projects

Nasa Asteroid app

Asteroid Radar is an app to view the asteroids detected by NASA that pass near Earth, you can view all the detected asteroids given a period of time with data such as the size, velocity, distance to earth and if they are potentially hazardous. I've used the MVVM architecture together with the Binding Adapter, Room, LiveData, Navigation and a WorkManager to automatically download the data and save it to a database. The app uses the Retrofit, OKhttp, Moshi and picasso libraries. Supports two languages (English and Spanish), different screen sizes, TalkBack and RTL.

IT Skills

Android Development

Kotlin, Native Android, MVVM, Firebase, Google Maps, JUnit, Retrofit, OKHttp, Room, Glide...

Web Development

Html5, CSS, Javascript, Wordpress

Development Environment

Android Studio, Atom, Visual Studio Code, IntelliJ IDEA, Bootstrap Studio

Operating System

MacOS, Windows

Others

Git, Amazon AWS

Education

Android Kotlin Developer Nanodegree by Google

2021
